

Amendments to the claims:

The following claim listing replaces all previous claim listings in the application.

1. (Currently amended) A process for preparing a moisture-curable, polyether urethane containing terminal cyclic urea/reactive silane groups which comprises reacting at an NCO:OH equivalent ratio of 1.5:1 to 2.5:1
- a) a hydroxyl component containing
- i) 20 to 100% by weight, based on the weight of component a), of a polyether containing two hydroxyl groups and one or more polyether segments, wherein the polyether segments have a number average molecular weight of at least ~~3000~~6,000 and a degree of unsaturation of less than 0.04 milliequivalents/g, provided that the sum of the number average molecular weights of all of the polyether segments per molecule averages 6000 to 20,000, and
- ii) 0 to 80% by weight, based on the weight of component a), of a polyether containing one hydroxyl group and one or more polyether segments having a number average molecular weight of ~~4000 to 16,000~~3,000 to 12,000 with
- b) an isocyanate component containing
- i) 20 to 100% by weight, based on the weight of component b), of a compound containing two isocyanate groups, and
- ii) 0 to 80% by weight, based on the weight of component b), of a compound containing one isocyanate group,
- provided that total percentages of a-ii) and b-ii) add up to at least 10, to form an isocyanate-containing reaction product and subsequently reacting this reaction product at an equivalent ratio of isocyanate groups to isocyanate-reactive groups of 0.8:1 to 1.1:1 with

- c) a compound containing an isocyanate-reactive group and one reactive silane groups in which at least 10 mole % of component c) is a compound corresponding to the formula

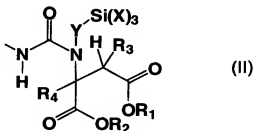

X represents identical or different organic groups which are inert to isocyanate groups below 100°C, provided that at least two of these groups are alkoxy or acyloxy groups.

Y represents a linear or branched alkylene group containing 1 to 8 carbon atoms.

R₁ and R₂ are identical or different and represent organic groups which are inert to isocyanate groups at a temperature of 100°C or less and

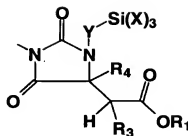

R₃ and R₄ are identical or different and represent hydrogen or organic groups which are inert towards isocyanate groups at a temperature of 100°C or less.

to form an intermediate polyether urethane containing at least a portion of terminal non-cyclic urea/reactive silane groups corresponding to formula II

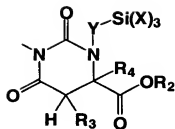

and converting the non-cyclic urea groups to cyclic urea groups by reacting the intermediate polyether urethane in the presence of an acid catalyst and heat to form terminal cyclic urea/reactive silane groups corresponding to formula III

and/or formula IV

Formula III

Formula IV

2. (Original) The process of Claim 1 wherein at least 50 mole % of component c) is a compound corresponding to formula I.
3. (Original) The process of Claim 1 wherein at least 80 mole % of component c) is a compound corresponding to formula I and
X represents identical or different alkoxy groups having 1 to 4 carbon atoms,
Y represents a linear radical containing 2 to 4 carbon atoms or a branched radical containing 5 to 6 carbon atoms and
R₁ and R₂ are identical or different and represent alkyl groups having 1 to 4 carbon atoms and
R₃ and R₄ represent hydrogen.
4. (Original) The process of Claim 1 wherein component a-i) is present in an amount of 20 to 90% by weight, based on the weight of component a); and component a-ii) is present in an amount of 10 to 80% by weight, based on the weight of component a).
5. (Original) The process of Claim 2 wherein component a-i) is present in an amount of 20 to 90% by weight, based on the weight of component a); and component a-ii) is present in an amount of 10 to 80% by weight, based on the weight of component a).

6. (Original) The process of Claim 3 wherein component a-i) is present in an amount of 20 to 90% by weight, based on the weight of component a); and component a-ii) is present in an amount of 10 to 80% by weight, based on the weight of component a).

7. (Original) The process of Claim 1 wherein component b-i) is present in an amount of 20 to 90% by weight, based on the weight of component b); and component b-ii) is present in an amount of 10 to 80% by weight, based on the weight of component b).

8. (Original) The process of Claim 2 wherein component b-i) is present in an amount of 20 to 90% by weight, based on the weight of component b); and component b-ii) is present in an amount of 10 to 80% by weight, based on the weight of component b).

9. (Original) The process of Claim 3 wherein component b-i) is present in an amount of 20 to 90% by weight, based on the weight of component b); and component b-ii) is present in an amount of 10 to 80% by weight, based on the weight of component b).

10. (Original) The process of Claim 1 wherein component a-i) is present in an amount of 30 to 80% by weight, based on the weight of component a); component a-ii) is present in an amount of 20 to 70% by weight, based on the weight of component a).

11. (Original) The process of Claim 2 wherein component a-i) is present in an amount of 30 to 80% by weight, based on the weight of component a); component a-ii) is present in an amount of 20 to 70% by weight, based on the weight of component a).

12. (Original) The process of Claim 3 wherein component a-i) is present in an amount of 30 to 80% by weight, based on the weight of component a);

component a-ii) is present in an amount of 20 to 70% by weight, based on the weight of component a).

13. (Original) The process of Claim 1 wherein component b-i) is present in an amount of 30 to 80% by weight, based on the weight of component b); component b-ii) is present in an amount of 20 to 70% by weight, based on the weight of component b).

14. (Original) The process of Claim 2 wherein component b-i) is present in an amount of 30 to 80% by weight, based on the weight of component b); component b-ii) is present in an amount of 20 to 70% by weight, based on the weight of component b).

15. (Original) The process of Claim 3 wherein component b-i) is present in an amount of 30 to 80% by weight, based on the weight of component b); component b-ii) is present in an amount of 20 to 70% by weight, based on the weight of component b).

16 – 20 (Canceled)
